**Configurational Forces: Thermomechanics, Physics, Mathematics, and Numerics (Modern Mechanics and Mathematics)** Gerard A. Maugin

Exploring recent developments in continuum mechanics, **Configurational Forces: Thermomechanics, Physics, Mathematics, and Numerics** presents the general framework for configurational forces. It also covers a range of applications in engineering and condensed matter physics.

The author presents the fundamentals of accepted standard continuum mechanics, before introducing Eshelby material stress, field theory, variational formulations, Noether's theorem, and the resulting conservation laws. In the chapter on complex continua, he compares the classical perspective of B.D. Coleman and W. Noll with the viewpoint linked to abstract field theory. He then describes the important notion of local structural rearrangement and its relationship to Eshelby stress. After looking at the relevance of Eshelby stress in the thermodynamic description of singular interfaces, the text focuses on fracture problems, microstructured media, systems with mass exchanges, and electromagnetic deformable media. The concluding chapters discuss the exploitation of the canonical conservation law of momentum in nonlinear wave propagation, the application of canonical-momentum conservation law and material force in numerical schemes, and similarities of fluid mechanics and aerodynamics.

Written by a long-time researcher in mechanical engineering, this book provides a detailed treatment of the theory of configurational forces?one of the latest and most fruitful advances in macroscopic field theories. Through many applications, it shows the depth and efficiency of this theory.

### **From reader reviews:**

#### **Eleanor Landa:**

What do you think of book? It is just for students because they're still students or the idea for all people in the world, the particular best subject for that? Merely you can be answered for that concern above. Every person has diverse personality and hobby for each other. Don't to be forced someone or something that they don't want do that. You must know how great and also important the book Configurational Forces: Thermomechanics, Physics, Mathematics, and Numerics (Modern Mechanics and Mathematics). All type of book can you see on many resources. You can look for the internet sources or other social media.

#### **James Soltero:**

Beside this Configurational Forces: Thermomechanics, Physics, Mathematics, and Numerics (Modern Mechanics and Mathematics) in your phone, it can give you a way to get closer to the new knowledge or information. The information and the knowledge you can get here is fresh through the oven so don't be worry if you feel like an outdated people live in narrow town. It is good thing to have Configurational Forces: Thermomechanics, Physics, Mathematics, and Numerics (Modern Mechanics and Mathematics) because this book offers for you readable information. Do you oftentimes have book but you don't get what it's all about. Oh come on, that won't happen if you have this in your hand. The Enjoyable blend here cannot be questionable, such as treasuring beautiful island. So do you still want to miss the item? Find this book along with read it from today!

#### **Nicholas Tapia:**

What is your hobby? Have you heard this question when you got pupils? We believe that that issue was given by teacher with their students. Many kinds of hobby, Every person has different hobby. And you know that little person similar to reading or as reading through become their hobby. You must know that reading is very important in addition to book as to be the factor. Book is important thing to increase you knowledge, except your own teacher or lecturer. You see good news or update in relation to something by book. Different categories of books that can you choose to adopt be your object. One of them is actually Configurational Forces: Thermomechanics, Physics, Mathematics, and Numerics (Modern Mechanics and Mathematics).

#### **Stacey Pinkston:**

Reading a publication make you to get more knowledge from this. You can take knowledge and information originating from a book. Book is written or printed or created from each source which filled update of news. With this modern era like at this point, many ways to get information are available for you actually. From media social such as newspaper, magazines, science publication, encyclopedia, reference book, new and comic. You can add your understanding by that book. Do you want to spend your spare time to spread out your book? Or just seeking the Configurational Forces: Thermomechanics, Physics, Mathematics, and

Numerics (Modern Mechanics and Mathematics) when you required it?
