Managing Water and Agroecosystems for Food Security (Comprehensive Assessment of Water Management in Agriculture Series)

Managing Water and Agroecosystems for Food Security (Comprehensive Assessment of Water Management in Agriculture Series)

Water protection, food production and ecosystem health are worldwide issues. Changes in the global water cycle are affecting human wellbeing in many places, while widespread land and ecosystem degradation, driven by poor agricultural practices, is seriously limiting food production. Understanding the links between ecosystems, water, and food production is important to the health of all three, and sustainably managing these connections is becoming increasingly necessary. This book shows how sustainable ecosystems, especially agroecosystems, are essential for water management and food production.
