An effective technique for data analysis in the social sciences

The recent explosion in longitudinal data in the social sciences highlights the need for this timely publication. Latent Curve Models: A Structural Equation Perspective provides an effective technique to analyze latent curve models (LCMs). This type of data features random intercepts and slopes that permit each case in a sample to have a different trajectory over time. Furthermore, researchers can include variables to predict the parameters governing these trajectories.

The authors synthesize a vast amount of research and findings and, at the same time, provide original results. The book analyzes LCMs from the perspective of structural equation models (SEMs) with latent variables. While the authors discuss simple regression-based procedures that are useful in the early stages of LCMs, most of the presentation uses SEMs as a driving tool. This cutting-edge work includes some of the authors' recent work on the autoregressive latent trajectory model, suggests new models for method factors in multiple indicators, discusses repeated latent variable models, and establishes the identification of a variety of LCMs.

This text has been thoroughly class-tested and makes extensive use of pedagogical tools to aid readers in mastering and applying LCMs quickly and easily to their own data sets. Key features include:

- Chapter introductions and summaries that provide a quick overview of highlights
- Empirical examples provided throughout that allow readers to test their newly found knowledge and discover practical applications
- Conclusions at the end of each chapter that stress the essential points that readers need to understand for advancement to more sophisticated topics
- Extensive footnoting that points the way to the primary literature for more information on particular topics

With its emphasis on modeling and the use of numerous examples, this is an excellent book for graduate courses in latent trajectory models as well as a supplemental text for courses in structural modeling. This book is an excellent aid and reference for researchers in quantitative social and behavioral sciences who need to analyze longitudinal data.

From reader reviews:

Johanna Hernandez:

Why don't make it to become your habit? Right now, try to prepare your time to do the important act, like looking for your favorite guide and reading a guide. Beside you can solve your trouble; you can add your knowledge by the reserve entitled Latent Curve Models: A Structural Equation Perspective (Wiley Series in Probability and Statistics). Try to the actual book Latent Curve Models: A Structural Equation Perspective (Wiley Series in Probability and Statistics) as your friend. It means that it can to become your friend when you experience alone and beside those of course make you smarter than in the past. Yeah, it is very fortunated for yourself. The book makes you much more confidence because you can know anything by the book. So , we should make new experience along with knowledge with this book.

Charles Lemaster:

Reading a guide can be one of a lot of action that everyone in the world loves. Do you like reading book and so. There are a lot of reasons why people love it. First reading a guide will give you a lot of new details. When you read a guide you will get new information since book is one of a number of ways to share the information or their idea. Second, studying a book will make you more imaginative. When you reading a book especially hype book the author will bring one to imagine the story how the characters do it anything. Third, it is possible to share your knowledge to other folks. When you read this Latent Curve Models: A Structural Equation Perspective (Wiley Series in Probability and Statistics), you could tells your family, friends and soon about yours e-book. Your knowledge can inspire others, make them reading a publication.

Derek Winter:

Do you have something that you enjoy such as book? The publication lovers usually prefer to select book like comic, limited story and the biggest you are novel. Now, why not hoping Latent Curve Models: A Structural Equation Perspective (Wiley Series in Probability and Statistics) that give your entertainment preference will be satisfied simply by reading this book. Reading routine all over the world can be said as the method for people to know world considerably better then how they react when it comes to the world. It can't be said constantly that reading habit only for the geeky person but for all of you who wants to always be success person. So , for every you who want to start examining as your good habit, you could pick Latent Curve Models: A Structural Equation Perspective (Wiley Series in Probability and Statistics) become your personal starter.

Sherrie Beardsley:

Can you one of the book lovers? If yes, do you ever feeling doubt if you find yourself in the book store? Try to pick one book that you just dont know the inside because don't evaluate book by its cover may doesn't work at this point is difficult job because you are scared that the inside maybe not seeing that fantastic as in the outside seem likes. Maybe you answer is usually Latent Curve Models: A Structural Equation

Perspective (Wiley Series in Probability and Statistics) why because the excellent cover that make you consider in regards to the content will not disappoint you actually. The inside or content is fantastic as the outside or perhaps cover. Your reading 6th sense will directly make suggestions to pick up this book.
