Information-Processing Channels in the Tactile Sensory System: A Psychophysical and Physiological Analysis (Scientific Psychology Series) George A. Gescheider, John H. Wright, Ronald T. Verrillo

Information-Processing Channels in the Tactile Sensory System addresses the fundamental question of whether sensory channels, similar to those known to operate in vision and audition, also operate in the sense of touch. Based on the results of psychophysical and neurophysiological experimentation the authors make a powerful case that channels operate in the processing of mechanical stimulation of the highly sensitive glabrous skin of the hand. According to the multichannel model presented in this monograph, each channel, with its specific type of mechanoreceptor and afferent nerve fiber, responds optimally to particular aspects of the tactile stimulus. It is further proposed that the tactile perception of objects results from the combined activity of the individual tactile channels. This work is important because it provides researchers and students in the field of sensory neuroscience with a comprehensive model that enhances our understanding of tactile perception.

From reader reviews:

Colleen Harman:

Here thing why this Information-Processing Channels in the Tactile Sensory System: A Psychophysical and Physiological Analysis (Scientific Psychology Series) are different and trustworthy to be yours. First of all reading a book is good nevertheless it depends in the content of computer which is the content is as delightful as food or not. Information-Processing Channels in the Tactile Sensory System: A Psychophysical and Physiological Analysis (Scientific Psychology Series) giving you information deeper since different ways, you can find any reserve out there but there is no e-book that similar with Information-Processing Channels in the Tactile Sensory System: A Psychophysical and Physiological Analysis (Scientific Psychology Series). It gives you thrill reading journey, its open up your own personal eyes about the thing in which happened in the world which is probably can be happened around you. You can actually bring everywhere like in playground, café, or even in your technique home by train. Should you be having difficulties in bringing the published book maybe the form of Information-Processing Channels in the Tactile Sensory System: A Psychophysical and Physiological Analysis (Scientific Psychology Series) in e-book can be your option.

Mark Hoffman:

Spent a free time for you to be fun activity to perform! A lot of people spent their spare time with their family, or their friends. Usually they undertaking activity like watching television, gonna beach, or picnic from the park. They actually doing same task every week. Do you feel it? Will you something different to fill your own personal free time/ holiday? Can be reading a book can be option to fill your free of charge time/ holiday. The first thing that you'll ask may be what kinds of publication that you should read. If you want to try look for book, may be the reserve untitled Information-Processing Channels in the Tactile Sensory System: A Psychophysical and Physiological Analysis (Scientific Psychology Series) can be good book to read. May be it might be best activity to you.

John Harrison:

Playing with family inside a park, coming to see the sea world or hanging out with good friends is thing that usually you could have done when you have spare time, in that case why you don't try issue that really opposite from that. One particular activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you have been ride on and with addition of information. Even you love Information-Processing Channels in the Tactile Sensory System: A Psychophysical and Physiological Analysis (Scientific Psychology Series), you could enjoy both. It is very good combination right, you still want to miss it? What kind of hang type is it? Oh occur its mind hangout guys. What? Still don't buy it, oh come on its called reading friends.

Bernard Taylor:

Is it a person who having spare time and then spend it whole day through watching television programs or just lying on the bed? Do you need something totally new? This Information-Processing Channels in the Tactile Sensory System: A Psychophysical and Physiological Analysis (Scientific Psychology Series) can be the solution, oh how comes? A book you know. You are so out of date, spending your spare time by reading in this brand-new era is common not a nerd activity. So what these publications have than the others?
